Subject: Materials used in the production of Ductile Iron pipe

To whom it may concern:

The materials used in the production of Ductile Iron pipe and fittings produced at Clow Water Systems are composed of 93% recycled materials. The 93% is composed of a variety of scrap steel. Let me know if you are in need of any additional information. Tours of our facility are also available upon request. For more information contact a Clow Sales Representative.

Thanks,

Keith Gildee
